

Surface Shroud Cover (SS__)

Used on all systems to enable flush mounted panels to surface mounted

(Picture above shows 2x Surface Shrouds to show both front& rear view)

The Surface shrouds provide two functions-

1. To protect the entrance panel from driving rain,
2. To allow the flush entrance panels to be mounted in a surface manner. They are constructed in anodised aluminium, and have varying lengths, dependant on the entrance panel that they are to be fitted with.

Variations

SS174	Surface Shroud for 1 & 2 Way Audio Panels
